

How big is the scale of lithium iron phosphate energy storage field

Overview Applications LiMPO 4 History and production Physical and chemical properties Intellectual property Research LFP cells have an operating voltage of 3.3 V, charge density of 170 mAh/g, high power density, long cycle life and stability at high temperatures. LFP's major commercial advantages are that it poses few safety concerns such as overheating and explosion, as well as long cycle lifetimes, high power density and has a wider operating temperature range. Power plants and automobiles use LFP.
