

# How many years does it take for Finland's commercial and industrial energy storage to pay back

Does Finland have energy storage?

This paper has provided a comprehensive review of the current status and developments of energy storage in Finland, and this information could prove useful in future modeling studies of the Finnish energy system that incorporate energy storages.

Is the energy system still working in Finland?

However, the energy system is still producing electricity to the national grid and DH to the Lempäälä area, while the BESSs participate in Fingrid's market for balancing the grid. Like the energy storage market, legislation related to energy storage is still developing in Finland.

Can PHS be used as energy storage in Finland?

Plans exist for PHS systems, but studies have indicated that there may be few suitable locations for PHS plants in Finland [94,95]. While large electrolyzer capacities are planned to produce renewable hydrogen, only pilot-scale plans currently exist for their use as energy storage for the energy system (power-to-hydrogen-to-power).

How can a Finnish energy system be modeled?

The energy system could be modeled with a tool such as EnergyPLAN, considering the effects of a much larger share of RES in the Finnish energy system and the need for flexibility from ESSs. In collaboration with this study, a survey was conducted among the Finnish BRPs about their views and needs regarding ESSs.

Does Finland pay for solar power?

Finland is one of the few countries where solar power, in many cases, does not receive any subsidies, although companies and communities may apply for energy aid for smaller-scale (<5 MW) solar PV projects, which covers 15 % of the investment costs.

How much renewable power does Finland have?

In the past, it has been estimated that the Finnish power system can cope with a share of 20 %-37 % of renewable wind and solar power without requiring larger additional investments in the grid and balancing capacity from DR and ESSs.
