

Industrial energy storage investment return analysis 2030

How big will energy storage be by 2030?

BNEF forecasts energy storage located in homes and businesses will make up about one quarter of global storage installations by 2030. Yayoi Sekine, head of energy storage at BNEF, added: "With ambition the energy storage market has potential to pick-up incredibly quickly."

Where will stationary energy storage be available in 2030?

The largest markets for stationary energy storage in 2030 are projected to be in North America (41.1 GWh), China (32.6 GWh), and Europe (31.2 GWh). Excluding China, Japan (2.3 GWh) and South Korea (1.2 GWh) comprise a large part of the rest of the Asian market.

How big is the energy storage industry?

Energy storage systems (ESS) in the U.S. was 27.57 GW in 2022 and is expected to reach 67.01 GW by 2030. The market is estimated to grow at a CAGR of 12.4% over the forecast period. The size of the energy storage industry in the U.S. will be driven by rising electrical applications and the adoption of rigorous energy efficiency standards.

What is the growth rate of industrial energy storage?

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application

What is the future of energy storage systems?

In addition, changing consumer lifestyle and a rising number of power outages are projected to propel utilization in the residential sector. Energy storage systems (ESS) in the U.S. was 27.57 GW in 2022 and is expected to reach 67.01 GW by 2030. The market is estimated to grow at a CAGR of 12.4% over the forecast period.

What is the growth rate of stationary storage in 2030?

By 2030, annual global deployments of stationary storage (excluding PSH) is projected to exceed 300 GWh, representing a 27% compound annual growth rate (CAGR) for grid-related storage and an 8% CAGR for use in industrial applications such as warehouse logistics and data centers.

BNEF's forecast suggests that the majority of energy storage build by 2030, equivalent to 61% of megawatts, will be to provide so-called energy shifting - in other words, advancing or delaying the time of electricity dispatch.
