

Ireland's complete mobile energy storage power supply structure

What is Ireland's Electricity storage policy framework?

The policy framework is a first of kind policy, which clarifies the key role of electricity storage in Ireland's transition to an electricity-led system, supporting Ireland's 2030 climate targets, it may be considered as a steppingstone on Ireland's path to net zero carbon emissions.

Can battery energy storage help the Irish electricity sector?

We find that battery energy storage can become one of the cornerstones of the energy storage portfolio in Ireland and also one of the few options which can enable the Irish electricity sector to access the required domestic flexibility resources.

How much battery storage do we need in Ireland & Northern Ireland?

In 2021 energy experts Baringa estimated that to hit the 80 per cent renewable electricity targets in Ireland and Northern Ireland by 2030 we would need at least 1,700 MW of battery storage on the island of Ireland. Every battery storage project connected makes our electricity grid more secure and helps to integrate wind and solar power.

Why do we need long-duration energy storage units in Ireland?

Based on Ireland's renewable targets, Irish power system requires long-duration energy storage units in order to cost effectively capture full economic benefits of a de-carbonized electricity sector. To this end, policies should be directed in a way that incentivize investors to expand long-duration energy storage units.

What is the energy storage sector like in Ireland?

Decommissioning and recycling at end of life In Ireland, the energy storage sector comprises mainly of an operational pumped hydro generation facility and c.700MW of short duration batteries providing system services, this will need to grow to c.4.5 GW by the mid 2030s.

What factors influence Ireland's energy storage needs?

As illustrated by the scenario modelling, Ireland's energy storage needs will be influenced by longer-term developments in the composition of the energy mix, zero emission generation capacity, the balance of electricity supply and flexible demand enabled through the deployment of energy storage, and the operation of interconnection capacity.
