Lava energy storage technology

Should you buy a lava energy storage system?
If you like the idea of hydrogen storage and making a financial return on energy storage isn't your primary motivation, then the LAVO Energy Storage System is for you. Put $250 down to pre-order one and receive no obligation at all in return.

How many kilowatts does a lava energy storage system use?
The other one just wasn't that hot.) The LAVO Energy Storage System,or LESS for short,can provide 40 kilowatt-hoursof stored electrical energy. This is far more than most residential battery systems and around three days average electricity consumption for a typical home.

What is the operating temperature of a lava energy storage system?
The LAVO Energy Storage System's operating temperature is from negative 10 to 50 degrees Celsius. As long as these figures are for ambient air temperature,that's a very suitable range for Australia. But the system itself will produce a lot of heat.

What is lava power?
LAVA Power - Turning heat into zero emission electricity. The world's most efficient heat engine transforms heat into zero-emission electricity at near-perfect efficiency.

What is Lavo's hydrogen energy storage system?
At LAVO,we're focused on green hydrogen. LAVO's Hydrogen Energy Storage System (HESS) combines patent pending metal hydride storage technology with a lithium-ion (Li-ion) battery,fuel cell,electrolyser,and innovative digital platform,to provide ground-breaking,long-duration energy storage capabilities.

Why should you choose lava?
Powered by a new thermodynamic cycle: LAVA's liquid-based isothermal technology converts heat into power and power into heat at near-perfect efficiency,delivering superior returns with rapid payback. With LAVA,clean energyisn't just the responsible choice,it's also a profitable one.
