

# Lithium ion storage cost vs benefit calculation in Zimbabwe

How sustainable is lithium mining in Zimbabwe?

Mining is traditionally water- and energy-intensive, leading to environmental degradation if unchecked. Sustainable lithium mining practices, as mandated by Zimbabwe's recent policy shifts, focus on minimizing these impacts through improved regulations and monitoring practices.

Is Zimbabwe a good lithium supplier?

Yet, as the world prepares for a rebound in lithium demand, Zimbabwe's role as a critical supplier remains under scrutiny, with the benefits to the local economy still in question. Globally, lithium prices suffered a dramatic fall in 2024, declining by as much as 80% from their peak.

Does Zimbabwe need a lithium recovery?

For Zimbabwe, one of the world's emerging lithium producers, this global recovery presents both an opportunity and a challenge. Zimbabwe is home to significant lithium reserves, yet the country continues to face challenges in ensuring that its lithium industry benefits the local economy.

Why does Zimbabwe need a lithium processing facility?

This facility aims to process lithium ore into battery-grade material, establishing Zimbabwe as a regional hub for lithium processing. However, logistical challenges, such as skilled labour shortages and infrastructure bottlenecks, persist, potentially delaying Zimbabwe's aspirations to meet global supply needs on time.

What can Zimbabwe do about global lithium prices in 2025?

This includes increasing local employment, fostering skills transfer, and developing local lithium processing facilities. The recovery of global lithium prices in 2025 could provide Zimbabwe with an opportunity to renegotiate terms with foreign investors and push for more local involvement.

What is Zimbabwe's lithium spodumene regulation?

This regulation mandates lithium miners to produce lithium spodumene concentrate, a semi-refined product, in Zimbabwe before it can be exported. Companies operating in Zimbabwe were asked to present battery-grade production plans to continue their mining licenses--a measure designed to increase local lithium beneficiation capacity.

The 2021 ATB represents cost and performance for battery storage across a range of durations (2-10 hours). It represents lithium-ion batteries only at this time. There are a variety of other commercial and emerging energy storage ...

The battery storage technologies do not calculate LCOE or LCOS, so do not use financial assumptions. Therefore all parameters are the same for the R& D and Markets & Policies Financials cases. The 2023 ATB
