

Lu qizhou talks about energy storage industry

Should energy storage be invested in China's peaking auxiliary services?

Therefore, direct investment in future energy storage technologies is the best choice when new technologies are already available. At this stage, the investment threshold for energy storage to involvement in China's peaking auxiliary services is 0.1068 USD/kWh.

How can we improve China's energy storage industry?

She also suggested refining market systems to boost efficiency and strengthen safety management alongside innovative pilot programs, so as to foster the high-quality, sustainable development of China's new energy storage industry.

Will China's energy storage demand reach 50 billion yuan in 2020?

It is predicted that with the continuous development of smart grid and RES' grid connection, energy storage demand during the "13th Five-Year" will further arise and reach to 50 billion yuan in year 2020. This paper begins with the elaboration the development status of China's energy storage.

Why should energy storage technology be mastered industriously?

Core techniques covering material, devices and system should also be mastered industriously. By that time, the energy storage technology system will be comprehensively established and achieve the international advanced level, thus leading the development of world energy storage technology and industry.

Should you invest in future energy storage technologies?

Additionally, the investment threshold is significantly lower under the single strategy than it is under the continuous strategy. Therefore, direct investment in future energy storage technologies is the best choice when new technologies are already available.
