

Luxembourg city energy storage battery testing and certification

Are there safety standards for batteries for stationary battery energy storage systems?

This overview of currently available safety standards for batteries for stationary battery energy storage systems shows that a number of standards exist that include some of the safety tests required by the Regulation concerning batteries and waste batteries, forming a good basis for the development of the regulatory tests.

Who can benefit from energy storage testing & certification services?

We provide a range of energy storage testing and certification services. These services benefit end users, such as electrical utility companies and commercial businesses, producers of energy storage systems, and supply chain companies that provide components and systems, such as inverters, solar panels, and batteries, to producers.

What is a distributed energy resource lab?

The distributed energy resource lab is a consortium of European laboratories for distributed energy sources. They publish white books regularly. This white book focuses on storage systems as seen from the grid (including converters), rather than on the storage technologies.

What chemistries can you test a battery with?

We are able to test primary and secondary (rechargeable) batteries with chemistries including alkaline, lithium-ion (Li-ion), nickel metal hydride (NiMH), lead acid, and nickel-cadmium (NiCd) as well as newer technologies such as zinc-based and flow batteries.
