

Luxembourg city household energy storage power production

What is Luxembourg's energy system like?

Luxembourg's energy system is characterised by high import dependence and reliance on fossil fuels. In 2018, 95% of its energy supply (100% of oil, natural gas and biofuels and 86% of electricity) were imported. It had the fourth-highest share of fossil fuels in TPES (78%) and the highest share of oil in TPES (60%) among IEA member countries.

How much does energy cost in Luxembourg?

Despite the small number of energy suppliers in Luxembourg (compared with other countries), there are significant price differences between the contracts on offer. The difference in price can be as much as EUR120 a year for a single person.

Can wind energy be used in Luxembourg?

Incorporating nuclear into Luxembourg's energy mix could address both reliability and sustainability. Additionally, countries like Denmark and Iowa have demonstrated that wind energy can achieve a significant share--more than half of their production--illustrating the potential of wind energy to diversify Luxembourg's low-carbon sources.
