

# Madagascar valley electric energy storage tank

How is energy used in Madagascar?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How does the private sector provide energy and digital services in Madagascar?

With the exception of the national electricity company JIRAMA, energy and digital services in Madagascar are provided by the private sector. Low population densities and high poverty levels in most of the underserved areas make it impossible for the private sector to deliver these services on a purely commercial basis.

How many people in Madagascar lack electricity?

Over 18 million people currently lack electricity access, placing Madagascar 13th in the list of countries with the largest unelectrified population worldwide. In terms of connectivity and accessibility of broadband services, despite progress in recent years, Madagascar ranks relatively low.

Why should Madagascar invest in energy & telecommunications?

" Access to energy and telecommunications are top priorities for our government. This project is fully aligned with our vision for the development of Madagascar. It will allow a significant increase in our access to energy and digital services," said Andry Rajoelina, President of Madagascar.
