

North asia grid invests in energy storage company

Could a grid-side energy storage power station solve urban electricity problems?

“The grid-side energy storage power station is a 'smart regulator' for urban electricity, which can flexibly adjust grid resources,” Tesla said on Weibo, according to a Google translation. This would “effectively solve the pressure of urban power supply and ensure the safe, stable and efficient electricity demand of the city,” it added.

Why are companies investing in generative AI services in Asia?

In Asia, companies are starting to invest heavily in power grid infrastructure to meet the new capacity demand from AI-related sectors. This is because operating and training generative AI services is highly energy-intensive, offering the prospect of a quick pay-off.

Does China need a grid-scale battery installation?

The demand for grid-scale battery installation, however, is significant in China. In May last year, Beijing set a new target to add nearly 5 gigawatts of battery-powered electricity supply by the end of 2025, bringing the total capacity to 40 gigawatts.
