

Pakistan energy storage project policy interpretation

Is Pakistan's energy security sustainable?

Pakistan's energy security is deteriorating, as the country imports nearly a third of its energy resources in form of fossil fuels. An import-driven energy policy is not sustainable for Pakistan's economy. This paper analyzes Pakistan's energy security under the 4-As framework. Pakistan's energy security is not sustainable. Green energy solutions would help address this issue.

What is Pakistan's energy security under the 4-A framework?

This paper analyzes Pakistan's energy security under the 4-A framework (Availability, Applicability, Acceptability, and Affordability) over the six-year period 2011-2017. The 4-As methodology attempts to measure and illustrate graphically the change in the energy security of a region by mapping it on to these four dimensions.

How has Pakistan performed on the affordability dimension?

Pakistan's performance on the affordability dimension of energy has improved due to an increase in energy supplies and the government's effort to maintain energy prices for the lowest income households through a system of subsidies.

What are the four dimensions of energy security in Pakistan?

The framework for energy security in Pakistan includes the essential 4-A dimensions: availability of resources (AV), applicability of technologies (AP), acceptability by society (AC), and affordability of energy resources (AF). Each dimension has four indicators to measure energy security.

Can electric power increase energy security in Pakistan?

Improving the generation efficiencies of Pakistan's gas-based electric power plants could reduce the rate of depletion of Pakistan's gas reserves and hence increase its energy security.

Are solar power projects attracting private sector interest in Pakistan?

Although utility-scale solar power projects in Pakistan are easy to execute, they have not seen as much private sector interest as wind power projects due to their large land requirements (Malik et al., 2018). Private sector interest in solar power projects is relatively lower compared to wind power projects in Pakistan.
