

Polish sa corps energy storage project

How big is Poland's energy storage capacity?

Currently, Poland has a total installed storage capacity of 1.4 GW, 85% of which comes from pumped hydro storage facilities. Looking ahead, 2.1 GW of BESS capacity is slated to come online by 2028. Government funding, through grants and loans, has been crucial to the development of the energy storage sector and the broader energy transition.

Does Poland need energy storage?

Poland's energy grid remains heavily dependent on carbon-intensive sources, with around 70% of its electricity generation in 2023 still reliant on coal and gas. However, the country has seen a rapid increase in renewable energy deployment over the past two years, which has also led to growing demand for energy storage solutions.

How will the Polish aid package work?

The Polish aid package will be funded by both the Modernisation Fund and the Recovery and Resilience Facility. Poland's energy grid remains heavily dependent on carbon-intensive sources, with around 70% of its electricity generation in 2023 still reliant on coal and gas.
