

Problems and countermeasures of energy storage enterprises

Is energy storage a precondition for large-scale integration and consumption?

So to speak, energy storage is the precondition of large-scale integration and consumption of RES. However, China's energy storage industry is at the exploration stage and far from commercialization. This restricts the development of RES to certain extent. For this reason, this paper will concentrate on China's energy storage industry.

Is excessive energy storage a threat to China's power system?

But the risks for power-system security of the converse problem -- excessive energy storage -- have been mostly overlooked. China plans to install up to 180 million kilowatts of pumped-storage hydropower capacity by 2030. This is around 3.5 times the current capacity, and equivalent to 8 power plants the size of China's Three Gorges Dam.

Is excessive energy storage a problem?

Spyros Foteinis highlights the acknowledged problem that an insufficient capacity to store energy can result in generated renewable energy being wasted (Nature 632, 29; 2024). But the risks for power-system security of the converse problem -- excessive energy storage -- have been mostly overlooked.

Why is energy storage oversupply a problem?

The expansion is driven mainly by local governments and lacks coordination with new energy stations and the power grid. In some regions, a considerable storage oversupply could lead to conflicts in power-dispatch strategies across timescales and jurisdictions, increasing the risk of system instability and large-scale blackouts.

What are the problems limiting the commercialization of China's energy storage?

Besides the objective technology immaturity, there exist other problems restricting the commercialization of China's energy storage including the high cost, incomplete technical standard system, imprecise evaluation system and imperfect policies. 3.1. Low technical-economic efficiency caused by high cost

What is the White Book for energy storage industry in 2014?

White book for energy storage industry in 2014. China Energy Storage Alliance 2014. China Electricity Council. The study on the development policy of energy storage industry. China Power Enterprise Management 3; 2015. p. 24-28. Global energy storage distribution: the US accounts for 40% and Japan accounts for 39%.
