

# Pumped water storage equipment manufacturing stocks

What is the largest pumped storage project in the world?

The 3,600 MW Fengning pumped storage project under construction in China will be the largest in the world once completed in 2025. Closed loop PHS plants have reservoirs that are not connected all the time to a naturally flowing water feature, such as a river or lake.

How big is the pumped hydro storage market?

Pumped Hydro Storage Market size exceeded USD 330 billion in 2021 and is projected to grow at around 10% CAGR during 2022 to 2028. The industry is poised to cross a cumulative installation of about 300 GW by 2028.

Where is the pumped hydro storage (PHS) market located?

The Pumped Hydro Storage (PHS) market has been studied geographically across five main regions: North America, Europe, Asia Pacific, Latin America, and the Middle East & Africa. Europe Pumped Hydro Storage (PHS) Market Size, 2023 (USD Billion)

Will closed-loop pumped hydro storage systems grow?

Closed-loop pumped hydro storage systems are anticipated to see prominent growth on account of minimum environmental impact across natural habitats coupled with the availability of non-connected water streams. Isolated reservoirs that have no direct connection with natural water supply will enhance the product deployment.

Are water stocks a profitable long term investment?

Water stocks in 2025 as profitable long term investments. We list water stocks from around the world, covering the following sectors: water supply, wastewater treatment, water technology, water infrastructure, seawater desalination, sanitation, water technician, irrigation technology, home soda maker and water entitlements.

Are pumped hydro storage projects cost-effective?

The development of pumped hydro storage is a challenging and complex process, which is tailored specifically for each project. Maintaining a PHS facility is relatively cost-effective for the long term, whereas pumped storage projects have high installation costs.
