

# Scientific energy storage home energy storage case sharing

What is shared energy storage?

With shared energy storage, multiple consumers will have access to the energy storage by charging and discharging the energy storage depending on their own needs. In this case, consumers can reduce the burden of the installation of energy storage by sharing initial investment costs.

Will residential consumers use individual energy storage or shared energy storage?

Given the historical data set, we assume that residential consumers will use individual energy storage or shared energy storage based on the parameter settings. For the default setting of energy storage, the capacity is determined based on the average hourly electricity demand load.

Is shared energy storage a good choice for Sustainable Communities?

By enhancing the capability for inter-user resource sharing, shared energy storage achieves economic and technical advantages. CESS, in particular, stands out in shared energy storage use scenarios and represents an excellent choice for sustainable communities in the future. Fig. 15. The Sharing Rate of Community Energy Storage Sharing (CESS). (a).

How can a shared energy storage policy be developed?

Through the analysis of the residential consumer data and the optimal shared energy storage operations resulting from the proposed mathematical optimization models, insight can be drawn for the development of a shared energy storage policy. 6.1. Assignment of consumers to energy storage

Can energy storage equipment improve the economic and environment of residential energy systems?

It is concluded that this kind of energy storage equipment can enhance the economics and environment of residential energy systems. The thermal energy storage system (TESS) has the shortest payback period (7.84 years), and the CO<sub>2</sub> emissions are the lowest.

What is the objective function of a shared energy storage system?

The objective function (2a) is designed to minimize the total energy cost of the entire residential community using shared energy storage. Constraint (2b) restricts that each consumer can have access to only one energy storage, i.e., only one energy storage can be assigned to each consumer.
