

Sol-ark pcc battery

What is a Sol-Ark pcc230 battery?

The Sol-Ark PCC230 battery is a 12 volt partial charge carbon sealed AGM battery designed for affordable residential or light-commercial grid-tied backup storage or off-grid renewable energy power demands (minimum is a bank of four to get 48V). With 3,000 cycles at 50% DOD for 7+years off-grid use or 12 years grid-assisted.

How does a Sol-Ark battery charge?

When the Sol-Ark battery has reached the Absorption voltage setpoint, it uses constant-voltage regulation to maintain the battery at the programmed Absorption voltage during the charging process. This phase lasts until the batteries have charged to 2% of their programmed Ah size.

Can a Sol-Ark battery be used in a grid failure?

In a grid failure scenario, the Sol-Ark does not limit the batteries' maximum current output. Therefore, it can be used. Take care to size the battery bank accordingly; the maximum power draw (kW) on the critical loads sub-panel should not exceed the maximum continuous discharge rate of the AmpliPHI battery bank.

What is Sol-Ark's?

Sol-Ark's provides future-proof solar energy storage systems and solutions for commercial businesses, industries, and homeowners. Learn more.
