

How much solar energy will Romania have by 2030?

Nevertheless, the government of Romania announced plans to add around 7 GW of new renewable capacity, comprising around 3.7 GW of solar energy, by 2030. This plan is likely to create immense opportunities for Romania's solar energy market in the future.

Does Romania have a solar PV project in 2023?

Overview of solar PV developments Following a period of lull, Romania has achieved in 2023 a significant milestone in its renewable energy journey - over 1 GW of new solar capacity installed in one year between distributed generation and utility scale projects.

How does solar energy work in Romania?

Once the sunlight passes through the earth's atmosphere, most of it is in the form of visible light and infrared radiation. Solar cell panels are used to convert this energy into electricity. The Romanian solar energy market is segmented by end-user.

How many large-scale solar projects are there in Romania?

As of the latest data available, there are over 880 large-scale PV projects in Romania, boasting a cumulative capacity of approximately 46,600 MW. This impressive number showcases the country's commitment to harnessing solar energy as a clean and sustainable source of power.

Is Romania a good country for solar energy?

National targets for solar PV With an average of 1,900 to 2,400 annual sunlight hours, Romania has significant natural potential for solar PV development. Yet, the country has not set ambitious targets for renewable energy sources, aiming for only 30.7% of its final energy consumption to come from RES by 2030.

Can Romania tap into its full solar potential?

Therefore, for Romania to tap into its full solar potential, the market will require a stable and supportive framework that can foster innovation, investment, and competitiveness in the long term. This article is part of SolarPower Europe's EU Market Outlook for Solar Power 2023-2027.
