

Solar battery charger reviews 2017

Is a solar charger a good idea?

A solar charger is more functional if you can angle it at the sun with integrated kickstand legs. Many solar-powered devices can reliably charge more than one device at the same time. This is important if you'll be sharing power among a group of people or have lots of tech to keep powered.

Can a solar panel charge a battery?

These chargers are usually designed to be used more like a portable battery pack and less like a solar panel because the solar panel often isn't big enough to reliably generate a lot of power from the sun. The panel will work in a pinch, but it can be slow to charge the integrated battery.

Can a solar charger charge more than one device?

Many solar-powered devices can reliably charge more than one device at the same time. This is important if you'll be sharing power among a group of people or have lots of tech to keep powered. Some solar chargers only have one power output, so they can't charge multiple devices at once.

Which solar charger should I buy?

The Jackery SolarSaga 100 is our favorite bigger solar charger. This lightweight panel is more affordable than most similarly sized models and performs as well as the best of them. It's user-friendly and effective in full and partial sunlight. When it's time to pack up camp, simply fold up the legs, then fold it in half and pack it away.

What is the best solar charger for off-grid camping?

100 watts or more: These are the largest solar chargers that you can still pack away to move. They're the best energy-intensive devices and have fast charging speeds to keep your large battery banks or power stations full. A 110-watt panel is best for charging a large power station when off-grid camping.

How many solar chargers are there?

We tested 34 solar chargers to power our adventures, including brands like Jackery, GoalZero, Renogy, and more. A good solar charger lets you power your essential communication and outdoor electronics, no matter how far off the grid you go. Over the last decade, we have tested almost 100 different solar panels of varying sizes.
