

South america pack energy storage module price

What is the unsubsidized cost of a module?

Asian modules from leading manufacturers have already been easily available at 41 to 45 cents outside the EU and other regulated markets for some time. Not long ago, pv magazine raised the question of whether modules for projects could be produced at these prices without subsidies.

Are module prices stabilizing?

While price movements on the module market are tapering off, the producers are outdoing each other with one new record after the next as far as cell and module efficiency are concerned.

What is the supply situation for multi modules?

In contrast, multi modules are still plentiful, at least on the spot market. Supply is particularly bad for high-efficiency mono c-Si modules. The current situation is not accurately reflected in module prices.

What are the module prices within the European Union?

Prices within the European Union are stagnating just above the 50 eurocent mark. While module prices for so-called non-EU projects, i.e. photovoltaic plants that are being built beyond the control of the EU Commission and its regulations, are once again (or still) located in the lower 40 eurocent range,

Where are the module prices if there are no anti-dumping measures?

When acquiring materials for projects outside the European Union, it is possible to identify where the module prices might be if there were no anti-dumping measures against Chinese manufacturers - that is around EUR0.40/W (\$0.50/W).

Does Europe still produce PV modules based on production regions?

The separation according to production regions is no longer as relevant, because the remaining module production facilities in Europe are increasingly operated by corporations of Asian origin.
