

Successful bid price of LFP battery system project in Singapore 2025

Why are LFP ESS battery prices falling?

However, challenges like excess production capacity and declining raw material costs have led to a continued significant drop in LFP ESS battery prices. Fortunately, this downward trend has begun to slow. Entering the traditional off-season for energy storage in 1Q25, many battery makers are likely to reduce production.

Are LFP batteries good for EVs?

"However, LFP batteries have now reached a performance level sufficient for most EV applications, making their lower cost a key advantage for automakers aiming to mass markets." Electric vehicle battery sales share by chemistry and region, 2022-2024. Courtesy of IEA. Licence: CC BY 4.0

Are LFP batteries better than NMC batteries?

The report states that LFP batteries reached 80% of the batteries sold in China during November and December. "The higher energy density of NMC batteries remains an advantage for applications requiring longer ranges or operation in cold climates," the report notes.

How will Price Wars affect battery production?

As terminal automakers continue to face fierce price wars, battery makers will encounter increased pressure from rising raw material costs, necessitating greater efforts to control overall production expenses.

Should Bess projects be proposed in Singapore?

One industry source told Energy-Storage.news recently that proposing BESS projects for development in Singapore is challenging given the lack of space in urban areas of the densely populated territory, and commensurate regulations on fire safety and urban planning, among other things.

Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 ...
