

# Successful bid price of LFP battery system project in Tanzania 2025

How much does an LFP cell cost in 2024?

The average price of an LFP cell was just under \$60/kWh in 2024. Currently, Greater China has a near monopoly in LFP cell manufacturing, considering the negligible LFP production capacity in Europe and North America. However, LFP production capacity is poised to expand, especially in Europe, through this decade.

Will LFP increase the global average price of LFP cells?

The addition of LFP capacities outside of Greater China will raise the global average price of LFP cells in the midterm, but as the manufacturing cost is brought under control through process improvements, the global LFP average cell price will gradually fall below the current level.

How much does a LFP cell cost?

The price of LFP cells is over 20% lower than nickel cobalt manganese (NCM) cells. The average price of an LFP cell was just under \$60/kWh in 2024. Currently, Greater China has a near monopoly in LFP cell manufacturing, considering the negligible LFP production capacity in Europe and North America.

How much money do African countries need to produce lithium batteries?

The required capital expenditure ranges from USD 0.5-1.5 billion. African countries could refine materials for lithium battery production and export to the US and EU. Refining could be in countries that are currently mining raw materials required for battery cell production or have a plan to start by 2030. These include: 4.

Are LFP batteries good for EVs?

"However, LFP batteries have now reached a performance level sufficient for most EV applications, making their lower cost a key advantage for automakers aiming to mass markets." Electric vehicle battery sales share by chemistry and region, 2022-2024. Courtesy of IEA. Licence: CC BY 4.0

Why did lithium-ion battery prices drop in 2024?

Overall, the price drop for lithium-ion battery cells in 2024 was greater compared with that seen in battery metal prices, indicating that margins for battery manufacturers were being squeezed. Therefore, suppliers are expected to push for price increases to mitigate losses with global demand for EVs and energy storage expected to grow in 2025.

According to a recent report released by Goldman Sachs, the global average battery price has dropped from \$153/kWh in 2022 to \$149/kWh in 2023. Goldman Sachs predicts that by the end of this year, the price is expected to fall to ...

Tanzania's strategic approach, combining proactive government policies with active private sector participation, is positioning the nation as a vital source of lithium, a critical component in the global transition
