

# Successful bid price of containerized BESS project in Bangladesh 2030

What is Bess & how will it impact Bangladesh?

With Bangladesh's electricity demand expected to reach 32 gigawatts (GW) by 2030, the introduction of BESS is seen as a crucial advancement for modernizing and stabilizing the national power grid. BREB, having nearly achieved universal electrification, will use this project to provide more reliable power, especially during peak demand periods.

What is the financial model for EV-Bess deployment in Bangladesh?

The current financial model for EV-BESS deployment in Bangladesh relies on a service payment to EV-BESS projects. This payment model does not create bankable projects due to the lack of any long-term fixed revenue streams. However, additional commercial revenue streams may be leveraged to improve commercial viability of these projects.

How much storage capacity will be provided by Bess system?

The BESS system, which will be deployed in four Power Distribution Societies (PBSs)-Dhaka PBS-1, Narsingdi PBS-1, Mymensingh PBS-2, and Kishoreganj PBS-will deliver 8 MW of storage capacity in each PBS, totaling 32 MW as a pilot basis Project.

How much energy storage does Bangla-Desh need?

120GW of RE generation. If a similar ratio were to be considered for Bangladesh's short-term RE aspirations (~1GW in the next three years), the resulting energy storage requirements would amount to 250MW/500MWh of energy storage.

Which financial framework would be applicable for Bess supported community electrification schemes?

The prevailing financial framework for rooftop solar, which would be applicable, for BESS supported community electrification schemes, is based on the existing bulk tariffs. The applicable tariffs for net metering and settlement period limit the commercial value of solar rooftop schemes.

What are short-term adaptations for deployment of Bess applications?

Short-term adaptations for deployment of grid connected BESS applications may include the limited deployment of solar PV to enable the generation facility to operate under generation facility definitions specified in the 2019 Grid Code Clause 2.1 (definitions).

A study on potential for energy storage deployment across South Asia published in 2021 by the US National Renewable Energy Laboratory (NREL), found that while India was the standout leader, other countries in the region including ...
