

# Survey on the current status of energy storage sales

What will energy storage be like in 2024?

In 2024, the global energy storage is set to add more than 100 gigawatt-hours of capacity for the first time. The uptick will be largely driven by the growth in China, which will once again be the largest energy storage market globally.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

What is the growth rate of industrial energy storage?

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application

What is the energy storage Grand Challenge?

This report, supported by the U.S. Department of Energy's Energy Storage Grand Challenge, summarizes current status and market projections for the global deployment of selected energy storage technologies in the transportation and stationary markets.

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").

What's happening in the residential storage market?

The residential storage market also saw significant year-over-year (YoY) growth, installing a record-breaking 458 MW in Q1. California and Puerto Rico accounted for 74% of this growth, while new markets like Illinois are beginning to emerge. The total 5-year utility-scale capacity forecast remains strong.
