

Technical requirements for bidding for energy storage liquid cooling pipes

What should be considered when deploying liquid cooling solutions?

deploying liquid cooling solutions using liquids with lower GWP values, as well as ODP. For legacy cooling systems where coolants with higher GWP are already deployed, consideration should be given to the inherent risk of coolant leakage, and a coolant reclamation program should be in place. In addition to coolants, materials

What is a liquid cooling pipeline?

Liquid cooling pipelines are transitional soft (hard) pipe connections that are mainly used to connect liquid cooling sources and equipment, equipment and equipment, and equipment and other pipelines. There are two types: hoses and metal pipes.

What is energy storage liquid cooling system?

Energy storage liquid cooling systems generally consist of a battery pack liquid cooling system and an external liquid cooling system. The core components include water pumps, compressors, heat exchangers, etc. The internal battery pack liquid cooling system includes liquid cooling plates, pipelines and other components.

How to choose an energy storage unit?

The choice of the unit should be based on the cooling and heating capacity parameters of the energy storage cabin, alongside considerations like installation, cost, and additional functionalities. 3.12.1.2 The unit must utilize a closed, circulating liquid cooling system.

What is a liquid cooling unit?

The product installs a liquid-cooling unit for thermal management of energy storage battery system. It effectively dissipates excess heat in high-temperature environments while in low temperatures, it preheats the equipment. Such measures ensure that the equipment within the cabin maintains its lifespan.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.
