

The current status and prospects of power energy storage development

Are energy storage technologies passed down in a single lineage?

Most technologies are not passed down in a single lineage. The development of energy storage technology (EST) has become an important guarantee for solving the volatility of renewable energy (RE) generation and promoting the transformation of the power system.

How has China accelerated its energy storage development?

Specifically, as a developing country facing significant challenges such as environmental pollution and carbon emissions, China has accelerated its energy storage development and widely promoted the advancement of energy storage technologies. This has led to a narrowing gap between China, the US, and Europe.

Why is advanced energy storage technology important?

Advanced energy storage technology plays a crucial role in mitigating the fluctuations of new energy sources and enhancing their absorption capacity. Patents serve as important indicators of technological innovation, directly reflecting current research trends and future directions in energy storage technology.

How does energy storage help balance supply and demand?

Any energy storage deployed in the five subsystems of the power system (generation, transmission, substations, distribution, and consumption) can help balance the supply and demand of electricity. There are various types of energy storage technologies, and they differ significantly in terms of research and development methods and maturity.

Why should we study energy storage technology?

It enhances our understanding, from a macro perspective, of the development and evolution patterns of different specific energy storage technologies, predicts potential technological breakthroughs and innovations in the future, and provides more comprehensive and detailed basis for stakeholders in their technological innovation strategies.

How many papers have been published on electrochemical energy storage in 2021?

In 2021, China alone published over 5000 papers on electrochemical energy storage, while the United States and Europe published around 1000 papers each. This indicates a high level of scholarly interest in electrochemical EST, with relatively consistent attention across different regions.
