

Total investment cost of BESS project in Tanzania

Will a Bess project start in 2021?

As opposed to a project start in 2021 (see Figure 21) the energy storage capacity of the BESS can be increased by another 25%. With 2025 forecasted Li-ion prices, a further reduction in LCOE is achieved by offsetting diesel consumption and capitalising on cheaper batteries.

When will Bess be deployed in South Africa?

The World Bank is also targeting the deployment of further BESS in South Africa, as well as in the West African Power Pool. These systems are likely to utilise Li-ion technology with deployment in the coming 5 to 10 years.

What factors affect the cost of a Bess system?

Several factors can influence the cost of a BESS, including: Larger systems cost more, but they often provide better value per kWh due to economies of scale. For instance, utility-scale projects benefit from bulk purchasing and reduced per-unit costs compared to residential installations. Costs can vary depending on where the system is installed.

Why is Bess so expensive?

If load demand for electricity remains constant, the cost of BESS (now and for the next five years) is too high to install batteries large enough to bridge multi-day periods of adverse solar and wind conditions.

How much will Bess cost reduce by 2035?

Forecasted cost reductions for small and medium sized systems of ~26% for small-scale Li-ion and ~23% for small-scale lead acid by 2035 to end-users will not make a significant change in the proposition of BESS for these small-scale projects.

Is Eskom deploying Bess in South Africa?

These include an 80 MW /320 MWh BESS by Eskom in South Africa that is under tender, and the inclusion of BESS in some of the bids to Eskom's Risk Mitigation IPP Procurement Programme. The World Bank is also targeting the deployment of further BESS in South Africa, as well as in the West African Power Pool.

3 · According to the BESS industry stakeholders interviewed by MRI as part of the study, foreign-made battery systems are cheaper, ranging between as low as 20,000 and 40,000 yen/kWh, and the cost of BESS subsidies is high ...
