

Total investment cost of photovoltaic ESS project in Peru

What is the development of solar PV energy in Peru?

Finally, Figure 21 shows the development over time of the installed capacity in MW of solar PV energy in Peru. Figure 21. Evolution (years) of the solar photovoltaic installed capacity (MW) in Peru. Figure 21 shows that the first stage of solar PV energy in the country began in 2012, with strong growth from 2012 to 2023.

What technological advances are applied in photovoltaic solar energy plants in Peru?

Finally, we can mention one of the most important technological advances applied in photovoltaic solar energy plants in Peru, the use of photovoltaic panels called bifacial solar panels. Bifacial solar panels can capture energy on both sides of the photovoltaic solar panel, whereas monofacial modules only receive energy on their front side.

How many solar photovoltaic projects are planned in Peru?

Table 17 shows that there is a total of 33 solar photovoltaic facility projects planned to be executed in Peru between 2024 and 2028. Furthermore, it is possible to see that the projects are in the northern zone (Piura) and southern zone (Ica, Tacna, Moquegua, Puno and Arequipa) of Peru.

What is the useful solar energy technical potential for Peru?

The useful solar energy technical potential for Peru is equivalent to 25,000 MW. Table 2 shows details of the geographical areas of the country with the greatest average solar energy, where values between 4.00 and 7.00 kWh/m²/day are recorded. Table 2. Geographical areas of Peru with the greatest average daily solar energy.

How much solar energy will Peru generate by 2028?

The COES has projected an income of 7218 MW from solar photovoltaic facilities by the year 2028. Table 17 shows the specifications of the solar PV facilities projected in Peru for the period 2024-2028 that are currently under engineering studies and processing of EIA studies. Table 17.

What are the options for concentrated solar power in Peru?

Considering Table 19, which shows the current technologies and technical conditions in Peru, the most viable options would likely be the utilization of parabolic trough collectors and solar power tower projects. Table 19. Characteristics of concentrated solar power (CSP) technologies considering the site-specific conditions of Peru.
