

# What are the development directions of large energy storage stations

How energy storage power stations are being built?

In terms of installed capacity, new energy storage power stations are now being built in a more centralized way and large scale with longer storage duration period, said the administration.

How is energy storage developing in China?

However, China's energy storage is developing rapidly. The government requires that some new units must be equipped with energy storage systems. The concept of shared energy storage has been applied in China, which effectively promotes the development of energy storage.

### 4.3. Explore new models of energy storage development

What are the two stages of energy storage in China?

The first stage (during China's 13th Five-Year Plan period) realizes the energy storage from the R&D demonstration stage to the initial stage of commercialization; the second stage (during China's 14th Five-Year Plan period) realizes the energy storage from the initial stage of commercialization to the stage of large-scale development.

Will China build a new energy storage system?

Technicians inspect wind farm operations in Hinggan League, Inner Mongolia autonomous region, in May 2023. WANG ZHENG/FOR CHINA DAILY China has been stepping up construction of new energy storage in recent years to build a new power system in the country amid its green energy transition, said authority.

Which region is the fastest in developing new energy storage?

The northwestern regions of the country, rich in solar and wind energy resources, has become the fastest region in developing new energy storage in the country, with 10.3 million kilowatts of new energy storage installed capacity put into operation so far, accounting for 29.2 percent of the country's total, it said.

Where is energy storage used?

It is mainly used in power transmission and distribution systems with loads close to the equipment capacity. The energy storage is installed downstream of the power transmission and distribution equipment that originally needs to be upgraded to delay or avoid capacity expansion.
