

Which chinese company can produce hydrogen and store energy

How resilient is China's hydrogen sector?

(Context: Our 2024 China Hydrogen Market Review) China's hydrogen sector continues to show resilience despite global H₂ deployment setbacks and China's own economic challenges, including tighter IPO approvals and local government debt.

Where is the world's largest green hydrogen & ammonia production facility?

In a groundbreaking move toward sustainable energy, Envision Energy, a Shanghai-based company, has launched the world's largest and most advanced green hydrogen and ammonia production facility in Chifeng, China. This colossal project marks a significant step in the global effort to reduce carbon emissions and transition to cleaner energy sources.

How much money did China spend on hydrogen in 2024?

Updated 11 June 2025 TL;DR: In 2024 China channelled ~\$10-12 billion (US \$1.4-1.7 bn) into 85 hydrogen deals. Electrolyser makers captured 42 % of primary-market funding, with AEM technology surging. Multi-round winners included LONGi Hydrogen and Geely's Farizon Methanol-H₂ unit.

Could a Chinese EV crossover be a success in hydrogen?

Chinese Contenders: Solar majors like LONGi, Trina, and Sungrow --plus potential battery/EV crossovers like CATL and Geely --could replicate their success from the solar/battery export game in hydrogen. LONGi's investment in HydroPro hints at deeper moves into Europe. Who's next?

What is the Chicheng wind-hydrogen storage and multi-energy complementary demonstration project?

The Chicheng Wind-Hydrogen Storage and Multi-energy Complementary Demonstration Project is a technological demonstration of the key technologies and equipment development for "hydrogen production and hydrogenation" in China Energy's key scientific and technological projects.

Can AI solve a big problem in green hydrogen production?

With this system, AI, clean power, and storage tech help solve a big problem in green hydrogen production: the unpredictability of renewable energy. Envision's ammonia output is already the largest in the world at 320,000 tonnes per year. But they plan to grow this capacity to 1.5 million tonnes each year by 2028.
