

# Wind solar storage project financing options in Oman 2030

Does Oman have a wind energy plan?

In recent years, Oman has developed comprehensive wind energy generation plans to ensure the optimum use of these renewable natural resources for the benefit of the country. Table 4 provides detailed wind power projects in Oman.

What is Oman doing in 2030?

Oman has embarked on several other projects in line with targets for 2030, including a wind farm in Dhofar, a solar IPP in Manah, 11 solar-diesel hybrid facilities, and the Sahim (Contribute) initiative to install small-scale solar panels on residential and commercial buildings.

How much solar energy does Oman use?

As clearly indicated in Table 3, the total reported solar energy consumptions in Oman as in 2017 is estimated to be at a maximum of 12 and 220 TJ, mostly from photovoltaic and heat sources, respectively. Other potential renewable energy resources, such as wind, geothermal, waves, and biogas, have been found to be abundant in Oman.

Why should Oman invest in solar energy?

Considering the availability of Oman's high solar radiation levels and its vast arid lands, it is crucial for the country, through both local and international partners, to invest in solar energy productions for sustainable economic development.

Is Oman a leader in offshore wind energy production in the MENA region?

A study conducted on the Oman Maritime Zone (OMZ) indicates that Oman could be rated among the leaders of future offshore wind energy production in the MENA region as high wind speed levels of 8-10 m/s were observed near the country's southern coastal zone.

Will Oman achieve net zero emissions by 2050?

Oman has committed to net zero emissions by 2050. The government is looking to expand its electricity-generation capacities through renewable independent power projects (IPP), with plans to derive at least 30 percent of electricity from renewables by 2030, mainly through onshore wind and solar projects.

After debt payments have been made, other investors (like equity investors) will be paid. In general, project's assets are used as collateral to the loan. This type of financing is common in renewable energy projects because building solar, ...
